Education:

Computer Science: Computer Game Design, B.S. *September 2025 to December 2027 (expected)**

University of California, Santa Cruz - Santa Cruz, CA

Associate of Arts and Sciences in Computer Science, *August 2022 to May 2025*

Cañada College - Redwood City, CA

Work Experience:

Game Audio Designer *June 2023 - August 2025*

Dead End Studios - *Remote*

- Led all audio as the studio's sole audio designer across a two-year development cycle, setting the audio direction and sonic identity of the game in collaboration with the dev team.
- Owned 20+ original assets end to end, from scoping and source recording through design, implementation, and final mix, including voiced ability callouts, hit impacts, and environmental layers.
- Built and maintained the project's sound library, establishing organization and naming standards so assets could be reused across the game.
- Implemented all audio in FMOD and Unity, authoring event structures and parameter-driven playback so cues tracked gameplay state and fired in sync with player actions.

Game Lab Teaching Assistant *September 2024 – June 2025*

Cañada College (Game Lab) *- Redwood City, CA*

- Supported 30+ students per semester across two concurrent project courses, running weekly in-person lab hours on Unity workflows, level design, and game development methodology
- Debugged student projects end to end: C# exceptions, null reference errors, physics and collision misconfiguration, prefab and component setup, and broken scene references
- Reproduced defects from incomplete bug reports in undocumented student codebases, isolating root cause in cases where the reported symptom originated elsewhere in the project
- Advised final project teams on scoping, level design, and mechanic implementation, adapting explanations across a wide range of student skill levels

Audio Engineer Internship *June 2024 – August 2024*

Tapedub *- Berlin, Germany*

- Managed end-to-end cassette releases for underground and indie artists across Japan, the US, Israel, and beyond, owning client communication from first mix through final product.
- Coordinated mix revisions and edits with artists across time zones and languages, turning feedback into clear revision rounds and keeping deliverables on schedule.
- Planned and executed audio setups for 3 live events in varied venues, handling speaker placement, mic and signal routing, Q-SYS configuration, and soundcheck to deliver clean sound in each environment.
- Recorded, edited, mixed, and mastered 10+ tracks in Pro Tools, using Waves and iZotope RX for EQ, compression, restoration, and dynamics processing.
- Designed original sound effects and music using synthesis, sample manipulation, MIDI, and Kontakt instruments, building reusable assets across client projects.

Relevant Project

Original Foley Sound Design Project

Personal Project *· Reaper · 2026*

- Recorded every sound myself with no library or third-party sources, performing each action against props and capturing multiple takes and mic positions to give myself options when layering
- Cleaned up the raw recordings in Audacity, removing room noise and clicks before bringing the files into Reaper
- Mixed the whole project on Reaper's stock plugins, shaping tone and dynamics and using reverb sends so cues sat in a consistent space
